Depression Screening: A Best Practice Approach within a Health Center

Margaret White, FNP-C
Lori Soos, MA, BSN, RN
Learning Objectives

• Explain the importance of depression screening within a student health center

• Identify screening tools utilized in implementing this best practice approach

• Identify the steps necessary to prepare your practice for the implementation of depression screening
“Nearly 51% of college students have received mental health services prior to coming to college”

Storrie, Ahearn & Turkett, 2010
“In the absence of systematic screening, family physicians miss at least 50% of cases of major depression”

Arroll, Smith, Crengle, Gunn, Kerse, Fishman, Falloon, Hatcher, 2010
“80-90% of those who seek the necessary form of mental health treatment can function effectively”

Borchard, 2010
Mental Health & College Students

- 1/5 college students experience depression in some form
- 44% of college students report symptoms of depression
- Over 2/3 of young people do not talk about or seek help for mental health problems

Borchard, 2010
Mental Health & College Students

• Stereotypes are one of the largest barriers to young people seeking the help they need (Borchard, 2010)
  – Although stigma continues to exist, more students are willing to discuss their mental health concerns (Eisenberg & Hunt, 2010)
  – Students continue to be unaware of services or do not utilize services when they know CS exists (Yorgason, Linville & Zitzman, 2008)
Depression & Suicide

- Young adults diagnosed with depression are more likely to attempt suicide than adults
  - About 19% of college aged adults contemplate or attempt suicide each year
  - Suicide is the second leading cause of death among college students ages 20-24
  - In about 4/5 college students, signs of depression and suicide are evident before an actual attempt

Depression & Academic Success

• College students with depression are twice as likely to drop out of school
  – Depression is a significant predictor of GPA and probability of dropping out (University of Michigan, 2009)
  – Association b/t depression & academic outcomes is strong among those who have a positive screen for anxiety disorder (University of Michigan, 2009)
Early Identification & Referral

- College semesters are brief, on average 14 weeks
- Student interactions may at times be somewhat random
- Early intervention is essential, ensuring timely referral to Counseling Services
- PHQ Scales assist us in quickly identifying students who may be at risk for depression and/or suicide
Depression Screening Tools

PHQ-2

PHQ-9
PHQ-2 Screening

- Validity/Sensitivity/Specificity
- PHQ-2 Questionnaire asks about frequency of symptoms of depressed mood and anhedonia
- Reduces depression screening to 2 questions enhancing routine screening for the most prevalent & treatable mental health disorder

(Kroenek, 2003)
### PHQ-2 Questionnaire & Scoring

<table>
<thead>
<tr>
<th>Over the past 2 weeks, how often have you been bothered by any of the following problems?</th>
<th>Not at All</th>
<th>Several Days</th>
<th>More Than Half the Days</th>
<th>Nearly Every Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>Little interest or pleasure in doing things</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>Feeling down, depressed, hopeless</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

If a student’s score is anything other than “0” they should be offered the PHQ-9
PHQ-9 Screening

- Validity, Sensitivity/Specificity
- Is a reliable and valid measure of depression severity (Kroenke, Spitzer, Williams, 2001)
- Useful clinical and research tool
- Can generate diagnosis of major depression
- Provides continuous score to monitor treatment
PHQ-9 Screening

• There are two components of the PHQ-9:
  – Assessing symptoms and functional impairment to make a tentative depression and diagnosis
  – Deriving a severity score to help select and monitor treatment

<th>Proposed Treatment Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-4</td>
<td>None</td>
<td>None</td>
</tr>
<tr>
<td>5-9</td>
<td>Mild</td>
<td>Watchful waiting; repeat PHQ-9 at follow-up</td>
</tr>
<tr>
<td>10-14</td>
<td>Moderate</td>
<td>Treatment plan, considering counseling, follow-up and/or pharmacotherapy</td>
</tr>
<tr>
<td>15-19</td>
<td>Moderate/Severe</td>
<td>Immediate initiation of pharmacotherapy and/or psychotherapy</td>
</tr>
<tr>
<td>20-27</td>
<td>Severe</td>
<td>Immediate initiation of pharmacotherapy and, if severe impairment or poor response to therapy, expedited referral to a mental health specialist for psychotherapy and/or collaborative management</td>
</tr>
</tbody>
</table>

The PHQ-9 is adapted from PRIMEMDTODAY, developed by Drs. Robert L. Spitzer, Janet B.W. Williams, Kurt Kroenke, and colleagues, with an educational grant from Pfizer Inc.
Depression Screening Implementation

1. Engage Practice
2. Identify Practice Approach
3. Implement & Collect Data
4. Develop Office System
5. Assess & Modify

Engage Practice ➔ Identify Practice Approach ➔ Implement & Collect Data ➔ Develop Office System ➔ Assess & Modify ➔ Engage Practice
Engaging Practice

- Identify Departmental Goal
- Assess Institutional Support
- Establish Staff-Buy In
- Identify Funding Source
Engaging Practice

• Identify Departmental Goal
  – Establish mechanism for routine screening of depression amongst student populace

• Assess Institution Support
  – Is it part of your mission, strategic plan, goals?

• Establish staff support/buy in
  – Most important since they will be doing the work

• Identify funding source
  – Not necessary, depends on implementation process
Identifying Practice Approach

2 Important Components

• Screening Process
  – Who is going to be screened
  – Will screening be:
    • Intra-departmental
    • Inter-departmental
      – Most successful, facilitates collaborative partnerships

• Case Management
  – Registered Nurses
  – Health Educator
  – Social Worker
Development of Office System

- Mechanism- Electronic vs paper
- Identify screening process within clinic
  - Role identification based on capabilities of office personnel in each office
- Identify tracking system
  - Ensures continuity of care & referral
  - Prevents loss of students from semester to semester
- Establish SOP’s on intra-departmental communication
  - Protocols for use, consents, follow-ups, missed appts
Implementation & Data Collection

• Implementation
  – Most effective if PHQ-2 is integrated into routine questions when seeking care
  – If screen positive, offer PHQ-9 screen
  – Share results with student at POS, opening dialogue
  – Refer if warranted, if refuses, you can bring back to SHS

• Data Collection
  – Establish your QI
  – What data is necessary and beneficial to you as a clinic
  – What are you going to do with the data
Assess & Modify

- Students in crisis
- When there is a break down in the system

PRN
- Assess processes
- Solicit staff feedback

Initially
- Assess often
- Re-assess after each change

Yearly
- Annual QI
- Modifications after each assessment

First Semester
- Assess processes
- Solicit staff feedback

NIAGARA UNIVERSITY
Education that makes a difference.
Clinical Finding
Niagara University 2012-13

• All students presenting to SHS with a scheduled appointment completed the PHQ-2 depression screening questionnaire
  – Total # students screened- 2,027
  – 4.48% (n=91) screened positive on the PHQ-2 and were offered the PHQ-9
  – 75.8 % (n=69) completed the PHQ-9 screen
  – 52.7 % (n=48) were referred from SHS to NUCS after being identified as “at risk”
• Early identification of students at risk allowed students to be connected with internal support systems resulting in the following:
  – 100% of students referred successfully finished their semester of study
  – 87.5% were retained this academic year
  – 27.0% successfully graduated from NU this year
  – 12.5% withdrew from NU
