Alcohol & Depression Screening: A Best Practice Approach within a Health Center

Lori Soos, MA, BSN, RN
Learning Objectives

• Explain the importance of alcohol and depression screening within a student health center
• Review three screening tools utilized in implementing alcohol and depression screening
• Identify four steps necessary to prepare your practice for the implementation of both the Audit- C and the PHQ screen
• Discuss two benefits of the early identification and treatment of symptoms through screening
“Nearly 51% of college students have received mental health services prior to coming to college”

Storrie, Ahearn & Turkett, 2010
“In the absence of systematic screening, family physicians miss at least 50% of cases of major depression”

Arroll, Smith, Crengle, Gunn, Kerse, Fishman, Falloon, Hatcher, 2010
“80-90 % of those who seek the necessary form of mental health treatment can function effectively”

Borchard, 2010
Mental Health & College Students

- 1/5 college students experience depression in some form
- 44% of college students report symptoms of depression
- Over 2/3 of young people do not talk about or seek help for mental health problems

Borchard, 2010
Depression & Suicide

• Young adults diagnosed with depression are more likely to attempt suicide than adults
  – About 19% of college aged adults contemplate or attempt suicide each year
  – Suicide is the second leading cause of death among college students ages 20-24
  – In about 4/5 college students, signs of depression and suicide are evident before an actual attempt

Depression & Academic Success

• College students with depression are twice as likely to drop out of school
  – Depression is a significant predictor of ↓GPA and ↑probability of dropping out (University of Michigan, 2009)
  – Association b/t depression & academic outcomes is strong among those who have a positive screen for anxiety disorder (University of Michigan, 2009)
Early Identification & Referral

• College semesters are brief, on average 14 weeks
• Student interactions may at times be somewhat random
• Early intervention is essential, ensuring timely referral to Counseling Services
• PHQ Scales assist us in quickly identifying students who may be at risk for depression and/or suicide
Depression Screening Tools

PHQ-2

PHQ-9
PHQ-2 Screening

• PHQ-2 Questionnaire asks about frequency of symptoms of depressed mood
• Reduces depression screening to 2 questions
• Enhancing routine screening for the most prevalent & treatable mental health disorder

(Kroenek, 2003)
# PHQ-2 Questionnaire & Scoring

<table>
<thead>
<tr>
<th>Over the past 2 weeks, how often have you been bothered by any of the following problems?</th>
<th>Not at All</th>
<th>Several Days</th>
<th>More Than Half the Days</th>
<th>Nearly Every Day</th>
</tr>
</thead>
<tbody>
<tr>
<td>Little interest or pleasure in doing things</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>Feeling down, depressed, hopeless</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

If a student's score is anything other than “0” they should be offered the PHQ-9
PHQ-9 Screening

• Is a reliable and valid measure of depression severity (Kroenke, Spitzer, Williams, 2001)
• Useful clinical and research tool
• Can generate diagnosis of major depression
• Provides continuous score to monitor treatment
PHQ-9 Screening

• There are two components of the PHQ-9:
  – Assessing symptoms and functional impairment to make a tentative depression and diagnosis
  – Deriving a severity score to help select and monitor treatment

# PHQ-9 Scores and Proposed Treatment Actions

<table>
<thead>
<tr>
<th>PHQ-9 Score</th>
<th>Depression Severity</th>
<th>Proposed Treatment Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-4</td>
<td>None</td>
<td>None</td>
</tr>
<tr>
<td>5-9</td>
<td>Mild</td>
<td>Watchful waiting; repeat PHQ-9 at follow-up</td>
</tr>
<tr>
<td>10-14</td>
<td>Moderate</td>
<td>Treatment plan, considering counseling, follow-up and/or pharmacotherapy</td>
</tr>
<tr>
<td>15-19</td>
<td>Moderate/Severe</td>
<td>Immediate initiation of pharmacotherapy and/or psychotherapy</td>
</tr>
<tr>
<td>20-27</td>
<td>Severe</td>
<td>Immediate initiation of pharmacotherapy and, if severe impairment or poor response to therapy, expedited referral to a mental health specialist for psychotherapy and/or collaborative management</td>
</tr>
</tbody>
</table>

The PHQ-9 is adapted from PRIMEMDTODAY, developed by Drs. Robert L. Spitzer, Janet B.W. Williams, Kurt Kroenke, and colleagues, with an educational grant from Pfizer Inc.
“Approximately 70 % of college students reported alcohol use in the past month”

O’Malley & Johnston, 2002
“Approximately 25% of college students report academic consequence of their drinking including missing class, falling behind, doing poorly on exams or papers and receiving lower grades overall”

Wechsler, 2002
“97,000 students between the ages of 18-24 are victims of alcohol-related sexual assault or date rape.”

Hingson, 2009
Alcohol Screening

There are five AUDIT questionnaires that are commonly used to monitor alcohol consumption

- Audit
- Audit C
- Fast
- SASQ
- Audit PC
AUDIT-C

AUDIT-C (AUDIT-Consumption) is derived from the first three questions of the full AUDIT.

• Takes a very short time to administer
• Will indicate whether an individual is potentially drinking at increasing or higher risk levels
• Cannot determine the type of intervention required
• Does not indicate alcohol dependence
# AUDIT-C Questionnaire and Scoring

<table>
<thead>
<tr>
<th>AUDIT-C Questions</th>
<th>Scoring system</th>
<th>Your score</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>How often do you have a drink containing alcohol?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>How many units of alcohol do you drink on a typical day when you are drinking?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>How often have you had 6 or more units if female, or 8 or more if male, on a single occasion in the last year?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Each question is answered with the corresponding score from 0 to 4. The scores for each question are added to obtain the score for the test.

A score of 5 or more indicates the individual is possibly drinking at increasing risk or higher risk levels.
AUDIT Scores

Drinker Typology based on AUDIT scores

- **20-40**: Possible Dependence
- **16-19**: Higher Risk
- **8-15**: Increasing Risk
- **1-7**: Lower Risk
- **0**: Abstainer
Full AUDIT Scoring

• AUDIT score 0: Abstainer
  – No action required for this group
• AUDIT score 1-7: Lower risk
  – Positive reinforcement
  – Brief Advice should be offered
• AUDIT score 8-15: Increasing risk
• AUDIT score 16-19: Higher risk
  – Brief Advice
  – Individuals in this range who have previously had Brief Advice and who are still scoring in the higher risk range could be given Extended Intervention by a competent practitioner
  – Referred
• AUDIT score 20-40: Possible dependence
  – Patients scoring 20+ on the AUDIT should be considered for referral to an appropriate service for treatment for alcohol dependence
Refusal of Referral

- If the patient refuses to consider treatment, he or she should be offered brief counseling in the practice and if this is refused, Brief Advice
- If any form of treatment or intervention is refused
  - the patient should be advised that he or she may be causing damage to their health and welfare by drinking at the current level
  - And they are risking more serious problems if they continue to drink at the current level
- They should be encouraged to return to the practice if they change their minds
Engaging Practice

- Identify Departmental Goal
- Assess Institutional Support
- Establish Staff-Buy In
- Identify Funding Source
Engaging Practice

• Identify Departmental Goal
  – Establish mechanism for routine screening of depression amongst student populace

• Assess Institution Support
  – Is it part of your mission, strategic plan, goals?

• Establish staff support/buy in
  – Most important since they will be doing the work

• Identify funding source
  – Not necessary, depends on implementation process
Identifying Practice Approach

2 Important Components

• Screening Process
  – Who is going to be screened
  – Will screening be:
    • Intra-departmental
    • Inter-departmental
      – Most successful, facilitates collaborative partnerships

• Case Management
  – Registered Nurses
  – Health Educator
  – Social Worker
Development of Office System

• Mechanism- Electronic vs paper
• Identify screening process within clinic
  – Role identification based on capabilities of office personnel in each office
• Identify tracking system
  – Ensures continuity of care & referral
  – Prevents loss of students from semester to semester
• Establish SOP’s on intra-departmental communication
  – Protocols for use, consents, follow-ups, missed appts
2 Benefits of Early Intervention
